PROFESSIONAL SUMMARY

- Accomplished Business Intelligence Consultant with over 20 years of experience with a proven track record in Business Intelligence (BI), Data Warehouse (DWH) and Data Analytics related projects. Proven ability to identify business needs and develop valuable solutions to drive accuracy and process efficiency.
- Have excellent skills in Data Warehouse, Relational and Multi-Dimensional databases, Data Migration, System & Data Integration, Reporting, Analysis and Data Management.
- Experienced in developing, implementing, documenting, monitoring and maintain the data warehouse extracts, transformations and ETL process in various industries like Telecom, Retail and Health Care etc.
- Strong understanding of modern data architectures, including Lakehouse and Microsoft Fabric, with hands-on experience designing unified analytics platforms that blend structured and unstructured data for scalable, real-time insights.
- Experience across entire Microsoft BI suite of products including Power BI, Microsoft Azure Synapse, SQL Server. Delivered multiple BI solutions using Power BI.
- Worked on small- and large-scale projects. Believe in teamwork. Have delivered as a team member, team lead and as independent consultant with excellent communication skills.

KEY SKILLS

Data Modelling | Data Vault 2.0 | Power BI | Tableau | Dimensional Modelling
Data Analysis | Business Requirement Document | SQL Server | Lakehouse
Microsoft Fabric | Azure Synapse | Stakeholder Management | ETL | Data Migration

EDUCATION AND CREDENTIALS

- Google Generative AI Leader (Oct 2025) – See Credentials
- Analyzing and Visualizing Data with Microsoft **Power BI** (Oct 2019) – See Credentials
- **Tableau** Analyst (Nov 2019) – See Credentials
- Master of Computer Application (**MCA**) & Bachelor of Computer Applications (**BCA**)

PROFESSIONAL EXPERIENCE

SENIOR TECHNICAL BUSINESS ANALYST (Mar 2022 – Sep 2025)

The Salvation Army (TSA)

Led enterprise-wide reporting and data modernization initiatives, playing a pivotal role in designing and implementing a centralized data warehouse and analytics ecosystem that supports strategic decision-making across finance, procurement, HR, and operations.

Key Responsibilities & Achievements:

- **Architected the foundational Power BI environment** for TSA, establishing governance, workspace strategy, and reporting standards to support scalable analytics across the organization.
- **Collaborated with stakeholders across multiple business units** to assess existing reporting solutions, capture future-state requirements, and design a unified data warehouse architecture to consolidate data from diverse systems.
- **Worked closely with SMEs from core platforms** including TechOne, Coupa, Workday, and ServiceNow to understand source system structures and business logic, ensuring accurate data mapping and integration.
- **Authored comprehensive Interface Specification Documents** to define data flows across ingestion, staging, and presentation layers, enabling seamless integration and traceability.
- **Performed data modeling using Data Vault 2.0 methodologies**, designing scalable and auditable structures for key source systems and supporting long-term data governance.
- **Led bug resolution and data validation efforts**, identifying and fixing critical issues in ETL pipelines to ensure data accuracy and reliability for downstream reporting.
- **Delivered targeted Power BI reports and dashboards** for stakeholders across finance, procurement, and executive leadership, improving visibility into operational metrics and strategic KPIs.
- **Recently contributed to data engineering tasks**, ingesting data from multiple systems into the warehouse using existing frameworks and enhancing pipeline performance and maintainability.
- **Managed stakeholder relationships and expectations**, serving as a trusted advisor across departments and ensuring alignment between business needs and technical delivery.

SENIOR BUSINESS INTELLIGENCE ANALYST (Jul 2020 – Mar 2022)

ARQ Group | Department of Health & Human Services | COVID-19 Response Unit

Delivered high-stakes reporting and analytics solutions that directly supported the Victorian Government's COVID-19 response, enabling timely public briefings, resource allocation, and policy decisions.

Key Responsibilities & Achievements:

- Designed and developed Power BI reports used by the Victorian Premier's Office for daily COVID-19 briefings, ensuring data accuracy and clarity under intense public and media scrutiny.
- Built and maintained the Power BI data model for case and testing analytics, serving as a core reporting asset within DHHS.
- Integrated data from multiple departmental and vendor sources, enabling unified dashboards for case tracking, testing volumes, and geographic spread.
- Created ArcGIS-powered visualizations to map COVID-19 cases and testing activity across LGAs and postcodes, including custom polygons for wastewater surveillance reporting.
- Conducted weekly stakeholder presentations to review report changes, gather feedback, and align analytics with evolving policy and operational priorities.
- Authored SQL queries and stored procedures to support Power BI data ingestion and transformation, optimizing performance and reliability.

SENIOR BUSINESS INTELLIGENCE ANALYST (Mar 2020 – Jun 2020)

Saputo Dairy Australia | Information Technology Group | Project Connect

Responsibilities:

- Engage with the key stake holders to understand the current state of the reporting environment.
- Develop a future plan for new reports and analytics environment.
- Migrated old reports into Power BI Report Builder to decommission old systems.
- Built reports and dashboards in Power BI to showcase the analytics capabilities and gathered feedback and future requirements around analytics.
- Developed complex SQL queries using stored procedures, common tables expressions (CTEs), temporary table to support Power BI and other reports.
- Integrated Custom Visuals based on business requirements using Power BI desktop.
- Conduct workshops to understand the requirements of the business. The workshops also provide an opportunity to demo the capabilities in the latest sprints.
- Create business requirements documents.

SENIOR BUSINESS INTELLIGENCE ANALYST (January 2019 – October 2019)

Telstra | Global Finance Services | Project Aurora

The Aurora project is implementing a new end-to-end IT solution to address Telstra's compliance obligation to meet the requirements of International Financial Reporting Standard 15 (IFRS15).

Responsibilities:

- Design and Build ETL packages (using SSIS) to source data from various systems and consolidate in a MS SQL Server. Transformed the data to meet the reporting requirements.
- Integrated Custom Visuals based on business requirements using Power BI desktop.
- Developed complex SQL queries using stored procedures, common tables expressions (CTEs), temporary table to support Power BI and SSRS reports.
- Build and publish operational reports (using SSRS) for month end processing by finance teams.
- Build analysis cube and Power BI dashboards to provide drill down and drill through capabilities to stake holders.
- Design and build the data warehouse in Microsoft SQL Server using the third normalisation form to provide robust and consistent data.
- Conduct workshops to understand the requirements of the business. The workshops also provide an opportunity to demo the capabilities in the latest sprints.
- Working with large datasets and create correlation between them to generate valuable KPIs, metrics & reports.
- Create business requirements documents and High-Level Design documents.
- Conduct daily scrum meetings with stakeholders.

LEAD BUSINESS ANALYST (October 2016 – January 2019)

Telstra | Reporting & Analytics | NBN Reporting

Purpose: The purpose of the NBN reporting projects was to bridge the gap between existing NBN reporting and transition to automated reporting platform. The project team was commissioned to gather the needs of the business, source & transform the data to meet the requirements. Reconcile data to gain confidence from stakeholders was a key component of the project delivery.

Responsibilities:

- Led the design & development of reporting data module for Consumer, Small Business & Wholesale data.
- Gathered and documented business requirements for analytical reports. Led the requirements meetings and data mapping sessions to understand business needs. Identified and documented detailed business rules.
- Built Power BI Dashboards for leadership to showcase key metrics and highlight problem areas.
- Expertise in writing complex DAX functions in Power BI and Power Pivot.
- Sourcing reliable, agreed data for the development of the Report, to produce robust results and provide one source of truth across the Telstra.
- Led the team of ETL developers, BAs and Testers.
- Led the daily scrum meetings and solution design meetings.

- Managed resources and time constraints throughout the project, including extracting the right experts at the right time from across the company and externally.
- Testing the functionality and useability of the Reports prior to delivery with their key stakeholders, allowing adjustments as needed to ensure its suitability.

SENIOR BUSINESS ANALYST (July 2015 – October 2016)

Telstra | Capability & Programs | Finance & Strategy – Various Projects

Finance and Strategy group manages all the finance related data in different applications and data warehouse. With the knowledge of finance applications, my role is to assess new requirements for a BI solution, coming in from all parts of the business, to offer different solution options to business. The role also involves reviewing other project documents for any consequential impact on finance applications.

Responsibilities:

- Participate in Solution Definition for large initiatives.
- Participate in assessing requests to determine allocation via daily meeting within the group.
- Review BRD / other project documentation for consequential impact or a required development.
- Clarify business requirements with the customer or stakeholder manager.
- Offer solution options to the customer.
- Liaise with partners / vendors for feasibility / VROOM and OOM cost estimates & manage funding.
- Prepare a High-level Assessment document with the solution and costs.
- Conduct workshops with to understand the requirements & prepare solution designs.
- Conduct handover meetings with Project Managers and assist with detailed design when required.
- Review partner/vendors design, build and test documentation and provide approval.
- Provide UAT support for any defects.

SENIOR TECHNCAL ANALYST – Microsoft Business Intelligence (January 2014 – July 2015)

Telstra |Information Services

FCRMAE (First Call Resolution & Multi Agent Event) is a data warehouse managing data for all the Telstra contact centers around the world. The data is used for Coaching and reporting purpose across enterprise by contact centers management. The call and agent data are also used for making payments to industry partners.

Responsibilities:

- Develop SQL Server Integration Services (SSIS) package to extract transform and load (ETL) data from Oracle Database, IVR Data, into SQL Server 2008 database.
- Responsible for all the new development in the FCRMAE Cubes using SQL Server 2008 & SQL Server Analysis Services (SSAS).
- Investigating existing issues within FCRMAE data warehouse within SQL Server 2008.
- Communicating and assigning dockets to vendors regarding data issues upstream.
- Communicating with customers within the business regarding data issues and resolving them.
- Provide technical documentation of the system.

SOLUTION DEVELOPER (October 2012 – December 2013)
ASSA ABLOY Australia Pty Limited

MULTIPLE TECHNICAL ROLES (May 2003 – September 2012)

Various Companies in India
